## Magrath named new UM president

C. Peter Magrath has been named president of the University of Missouri system. Magrath, currently president of the University of Minnesota, will succeed President James C. Olson, who retired July 1.

Magrath's appointment was made by the Board of Curators at a special meeting held in Columbia in June.

UM Vice President for Academic Affairs Melvin D. George will serve as interim president until Magrath assumes his duties on Jan. 1, 1985.

"I thank the curators for their confidence in me," Magrath said following the announcement of his appointment. "I am here today in large measure because I see a great challenge to help strengthen and build a University of Missouri for the 21st century — only 15 years away."

Olson said he was "delighted" to be succeeded by Magrath.

"The president you have appointed is one of the leading lights of American higher education," Olson said in a prepared statement. "I am convinced (he will) provide the leadership necessary to bring the university to new heights of excellence."

Magrath has been president of the University of Minnesota since 1974. In a statement announcing his plans to leave Minnesota, he said "I believe my work here is finished. This is a good time then for me to accept a new challenge in a new place."

Magrath announced that he plans to pursue three general objectives:

- A commitment to a realistic planning process that leads to specific, coordinated efforts to build and improve selected programs and activities. A creative planning process developed at the University of Minnesota under Magrath's leadership has become a national model for state universities.

"I commend the curators for their commitment to planning; indeed, if that were not their thinking, I would not be here today," Magrath said.

- Improvement of the financial support of the university from the private and corporate sectors. The University of Minnesota last year ranked first among major state universities in the amount of private giving.

"I am eager to tie the generation of needed support to our planning and priority setting process, and I am convinced that the University of Missouri can dramatically improve its financial support from the private and corporate sector," he said.

- To personally tell the UM story by showing how it contributes to the state's bright future.

"I am eager to communicate and work closely with our governor, our legislature and our citizens. This after all is the Show-Me state, and we have an obligation to show and tell our story — not for the university's sake but for the state's sake, for it is a vital ingredient in Missouri's economic and cultural prosperity."

"I believe in leadership, and I know a university can be both managed and led," Magrath added. "It is not easy, but it can be done. I place a high value on discussion and consultation; I in fact insist on it. But I also believe that decisions and actions must follow discussion and consultation."

Prior to his tenure as University of Minnesota president, Magrath, 51, was president of the State University of New York at Binghamton from 1972 to 1974. From 1968 to 1972 he was a faculty member and administrator at the University of Nebraska-Lincoln, serving as dean of the College of Arts and Sciences, dean of faculties, interim chancellor and vice pre-

**IN AND OUT:** Incoming University of Missouri president C. Peter Magrath (above left) hails from the University of Minnesota. Former UM President James C. Olson (above right) retired on July 1 after serving the university for 16 years.

sident, and vice chancellor for academic affairs. He taught political science at Brown University from 1961 to 1968 and was associate dean of the Graduate School there in 1965 and 1966.

A native of New York, he earned a bachelor's degree summa cum laude in political science from the University of New Hampshire and a doctorate from Cornell University. His fields of scholarly specialization and interest are American government, particularly constitutional law and history and the operation of the U.S. Supreme Court; higher education

administration and leadership, public policy and financing; and international affairs. He served as an army artillery officer from 1955 to 1957, including active duty in the Panama Canal Zone.

Magrath is a widely published author. His writings include four books, a monograph and many articles on political science and higher education.

Magrath said his wife, Diane, is "an invaluable partner in the university presidency." Since their marriage in 1978, she has performed such duties as public speaking and media appearan-

ces, and has leadership responsibility for three national educational association spouses' programs.

Magrath said he will enjoy working with vice president George, who will fill in as president until January. "We worked together intimately in the past, and it will be fun to do so again."

"We are fortunate that the university is sound and healthy; it has a history that promises a future of even greater service and value to Missouri. But I am convinced that it can and must be improved."

## Blacks seek changes in UMSL policies

A hearing concerning the alleged unfair treatment of blacks on the UMSL campus has tentatively been scheduled for July 10 at UMSL.

The public hearing was scheduled after black employees and students from the university went to members of the Missouri Legislative Black Caucus asking for help, according to Michael Johnson, president of the Associated Black Collegians, a student organization.

In a letter to his colleagues, Charles "Quincy" Troupe, chairman of the caucus, asked for the hearings and an investigation.

"It's hoped that the outcome of the investigation will make [UMSL] a place where all people can work and get an education," the letter said. "I don't feel we as a caucus should continue to vote to put public dollars into an institution that discriminates against blacks."

Chancellor Arnold B. Grobman, when contacted last week, said he was unaware of plans for the meeting and so declined to comment. Dean of Student Affairs Lowe S. MacLean also said he had not been notified about

the meeting.

"This comes as a complete surprise to me," MacLean said. "ABC hasn't come to me about this."

MacLean added that his office generally had a good relationship with ABC and had worked with the organization to plan the Rev. Jesse Jackson's visit to UMSL in April.

"Our primary concerns are the hiring of more black faculty members, retention of black students and faculty, and more upper level black administrators," Johnson said. He added that he and others had tried to work with UMSL administrators, but felt that they had to go "higher than that for believability."

"Until you apply pressure to the budget nothing really gets done," he said. Some members of the black caucus also serve on committees which allocate state funds to the university.

A meeting place for the hearing had not been announced as of Current press time. For more information, call the ABC office at 553-5731.

## Student curator bill approved

A UM student will now be allowed to hold a position on the Board of Curators, due to a bill recently passed in the Missouri Legislature.

The bill provides for a student representative to sit on the governing bodies of all state colleges and universities. Gov. Christopher S. Bond signed the bill Thursday in Jefferson City.

"This gives us a voice on the inside," said Greg Barnes, president of UMSL's Student Association. Barnes and past association presidents Barbara Willis and Larry Wines were active in lobbying for the bill.

Barnes said that although the student representative will have no voting rights, and will not be allowed to attend executive sessions of the board, he feels students will

benefit.

"It's kind of a first step after years of fighting," Barnes said. "Hopefully in the long run we'll get that student to vote."

The bill also stipulates that the student will not receive compensation for his service and will not be reimbursed for expenses.

The student will be appointed by the governor from a list of three names submitted by the student government presidents on the four UM campuses. Each student representative will serve a two-year term except the first, whose term will begin in August and continue through Jan. 1, 1986.

Appointments will be made in rotation among the four campuses. A student from the Columbia campus will be the

first representative, followed by representatives from Rolla, Kansas City and St. Louis.

Barnes said that one issue still to be worked out was the problem of communication between the campuses. "There will be a lot of correspondence and phone calls," he said. "We're pretty optimistic. There's been a lot of cooperation between the four campuses."

"A lot will depend on the initiative of the individual," he added. "But it could do a lot of good if it's carefully and professionally handled."

Barnes said that at other schools with student curators, reports said that those students could have "quite a bit of influence."

"The curators tend to listen to people," he said. "They're very receptive to that."

## umsl update

### Champagne named associate dean

Roland A. Champagne has been named associate dean of the College of Arts and Sciences at UMSL. The appointment, effective August 15, was announced by E. Terrence Jones, dean of the College.

Champagne, a professor of French, joined the UMSL faculty in 1975. He holds a B.A. in comparative literature from Providence College and an M.A. and a Ph.D. in French literature from the Ohio State University. He has published three books and numerous articles and reviews about twentieth century French literature.

From 1980 to 1983, Champagne was chairperson of UMSL's modern foreign languages department. In 1983 he also chaired the first Weldon Spring Humanities Seminar, an interdisciplinary group of scholars drawn from the four UM campuses.

Champagne will oversee a wide range of projects in the humanities, Jones said. He will succeed Mark A. Burkholder, UMSL professor of history who served as associate dean of the College from 1980 to 1983.

Champagne

### Professor to head Metropolitan Center

Phares

Donald Phares, professor and chairperson of the economics department, has been named director of the Center for Metropolitan Studies at UMSL. He succeeds James Laue, who recently was named president and executive director of the Conflict Clinic Inc.

Phares joined the UMSL faculty in 1969 as an assistant professor of economics and a fellow in the Center for Metropolitan Studies. In 1973 he was promoted to associate professor and continued his work with the center in subsequent years, serving as associate director from 1978 to 1981 and acting director

from 1981 to 1982. He has served as chairperson of the economics department for the last two years and was recently promoted to professor.

He is the author of numerous articles, publications, and books including "Who Pays State and Local Taxes?" a book published in 1981 by Oelgeschlager, Gunn, and Hain.

The UMSL Center for Metropolitan Studies was established in 1965 to conduct research on urban problems, offer training experiences for students in urban research, and provide community service to the metropolitan area.

### KWMU hosts party

KWMU Radio will throw a free "Powdermilk Biscuit and Garish Summit Party" on Saturday, July 7. The festivities celebrate both the 10th anniversary broadcast of "A Prairie Home Companion" and the inaugural broadcast of "The Bob and Ray Public Radio Show" in its new time slot. Fans of old-time radio humor may tune into the FM 91 gala broadcasts or they may listen with the FM 91 personalities at the gathering. The free party will take place at Grace and Peace Fellowship, 6003 Kingsbury in the city's West End, from 4 to 8 p.m. on July 7.

Two million listeners nationwide tune in to "A Prairie Home Companion," hosted by humorist Garrison Keillor. The old-time radio show features a variety of music — jazz, swing, bluegrass, ethnic and operetta, all the news from the make-believe town of Lake Wobegon, and "commercials" for Powdermilk Biscuits ("the biscuits that give shy people the strength to get up and do what needs to be done"). "A Prairie Home Companion," one of FM 91's most popular shows, airs Saturday from 5 to 7 p.m.

"The Bob and Ray Public Radio Show" features two of radio's most outlandish comedians, Bob Elliot and Ray Goulding. The comedic duo move to a new time at 4:30 p.m. on Saturdays beginning July 7. Made possible by a grant from INDEECO, the Bob and Ray broadcasts will continue, the saga of Garish Summit, the soap opera with the unforgettable Murchfield family.

Grace and Peace Fellowship is located four blocks north of Forest Park Parkway on Des Peres at Kingsbury. Anyone wishing to attend the festivities may make reservations by calling KWMU at 553-5968. KWMU is the National Public Radio Station at UMSL.

### Observatory open for public viewing

The planets Saturn, Jupiter and Mars will be in position for viewing on Friday, July 6, when the UMSL observatory holds its monthly open house from 8:30 p.m. to 10:30 p.m., weather permitting.

The public is invited to view the planets, the first-quarter moon and other sky objects through the university's 14-inch Celestron telescope. The observatory is located next to the student parking lot on the South Campus.

Another open house will be held on Aug. 3. Special arrangements can be made for groups to visit the observatory. For more information, call the physics department at 553-5931.

## University computers make accessible targets

BALTIMORE, Md. (CPS) — In a scene that could have been lifted out of the movie "War Games," two college sophomores surreptitiously plugged into their school's main computer and scanned through confidential academic and administrative records.

The two were caught. Unlike the movie heroes, they didn't whoop with and hug their victims at the end.

In fact, the end came last week, when Brian Ewell and Eugene Nizera, the two students, were fined \$450 and each given a year's probation.

Perhaps the most significant part of the caper is that they were students at the University of Maryland-Baltimore County, a school not widely perceived as a computer center.

But as the microcomputer invasion escalates, bringing with it all sorts of benefits and possibilities, colleges of all types and sizes are faced with a troubling new problem: student computer crime.

"We've never handled (a crime) like this before," lamented security chief Robert Neilson. "It could be a serious matter as far as UMBC is concerned. All sorts of risks are involved here."

They've been involved on scores of campuses in recent months.

At Michigan State University, for instance, three students crawled through a series of baricaded underground steam tunnels last year to gain access to the chemistry department's computer terminals.

Police at Broward Community College in Florida, likewise, nabbed two students in the school's computer lab as they gained illegal access to the campus mainframe and began altering their grades.

And so it is going at campuses across the country as students test their blossoming high tech skills by pitting themselves against campus — and sometimes off-campus — computer security systems.

And so far, it appears, the students are ahead.

Partly because the technology is new and vulnerable, and partly because computer hacking is a so-called "victimless crime," most campuses are still wholly unprepared to cope with the new technological threat.

"The basic problem is one colleges have had for a number of

### Most campuses are still wholly unprepared to cope with the new technological threat.

years as computers have begun showing up on campuses," said Gerald Isaacson, manager of information services at Wang Laboratories and an expert on computer security.

Student hackers and dishonest employees occasionally have been penetrating campus mainframes for a decade now, Isaacson says.

UCLA, Lehigh, Stanford and Yale, to name a few, have suffered from computer vandals over the last several years.

But now that many schools require students to bring their own microcomputers to campus, the problem is no longer limited to a handful of students with the knowledge and access required to penetrate a mainframe's confidential files, security consultants point out.

And as more students learn about computers and security systems, experts fear the hacking problem could spread at an exponential rate.

"Don't think for one minute it's going to get better," warned Art Gillis, president of Computer-Based Solutions, an Atlanta-based computer security firm specializing in bank computer security.

"It's almost like we're educating a whole new generation of computer criminals that are way smarter than any of us who've come before them," Gillis said. "These new guys are good, real, real good."

But unlike banks and other businesses which have been dealing with computer security problems for years, most colleges are neither prepared nor willing to deal with the threat.

For one thing, "Colleges, especially, want and need to maintain a climate of openness," Isaacson pointed out. "It's difficult to have the kind of access restrictions a bank or insurance company would have."

At the same time, Gillis added, because of the high costs of computer security systems, many colleges simply ignore the threat.

"We haven't done much yet," admitted David Bray, computing director at Clarkson University, which last fall began requiring all entering freshmen to come equipped with their own microcomputers.

"I won't talk about it," said Wesleyan's computing director, David Todd, of a recent incident in which four students used phony or stolen passwords to vandalize the school's mainframe.

"We've got enough problems without constantly having things exposed in the paper," Todd added. "All I'll tell you is we've dealt with it and don't expect any further problems."

UMBC Computing Director James Harvison will say only that "We found the hole and plugged it" where Ewell and Nizera penetrated the system.

Colleges usually plug such holes, however, only after someone penetrates the system. Instead, they should build security systems into their computers from the start, Gillis argues.

"There's an awful lot of generic stuff they can do to secure a computer," he explained, such as electronic locks, encoding devices that jumble the data so only someone with another computer can decipher it, and organizing records so students can't get to confidential information.

"But none of this stuff is free," Gillis explained. "It's not even cheap. And colleges have got to be ready to spend some bucks."

And even after those bucks are spent, most experts agree, any security system can be penetrated if the hacker is intelligent and dedicated to breaking it.

"I think, in a way, it's the nature of the game," said Michigan State's computing director, Lewis Greenberg.

"A lot of students do their hacking as an intellectual exercise. It's the challenge of seeing how well they know the system."

Some instructors even encourage hacking as a way of challenging their students' programming abilities, Isaacson says.

"I actually gave a presentation in one computer accounting class and the instructor told the class he'd give an 'A' to anybody who could break into the campus computer," he recounted. "That's just not right."

Fall '84 — Winter '85

### Student Employment Opportunities

The University Center is now accepting applications for part-time student positions in the following areas:

University Food Services  
Information Desk  
Student Custodians  
Cashiers  
Ticket Sales/Ushers  
and other Program Support Services

Interested students who enjoy working with other UMSL students, who require a flexible work schedule, and who appreciate the convenience of working on campus may apply in Room 267 University Center or call 553-5291 for additional information.

An Equal Opportunity Employer

# Seeking remnants from past times

Story and photos  
by Sharon Kubatzky

Armed with shovels, buckets and bags, UMSL students along with their instructors searched for signs of prehistoric life in Bridgeton.

Ten students participated in this year's Archaeology Field School, each working six hours per day, five days per week, for six weeks. For their part in the project, students are awarded six credit hours and, hopefully, learn something about their ancestors and the way they lived.

"You can learn about humans, how people lived in the past," said Joe Harl, co-director of the field school and research analyst. "It wasn't so different then — they had many of the same problems we do. Energy crisis, environmental problems, overpopulation, inflation — you name it. They're at different levels but the problems are still there."

Harl and Neal Lopinot, assistant director of the Archaeological Survey, headed the field school.

The site currently being excavated is located in a wheat field in Bridgeton. From materials found on the surface, Harl said that archaeologists know the site had been occupied during several different time periods beginning in 8000 B.C. and continuing through the 1940s, when an old farmhouse was located there.

Harl explained that the first step in excavating a site is to compile a research design — a hypothesis or goal as to what will be found at the site. Then a systematic surface survey is made to determine how the site was used. Harl said that concentrations of artifacts such as pottery or tools found on the surface can indicate the date or level of usage of the site. Then a series of test units are dug to check for areas with high concentrations of artifacts known as features.

During this, the third year of digging at the site, Harl said the goal of the field project was to continue to learn about the structure of the community which had occupied the area.

"We wanted to understand how the village was set up," he said. "We knew there had been several house structures, and we found storage and trash pits intact. We wanted to know the organization of the village."

Harl said that despite most peoples' perceptions of archaeology, intact artifacts are not just sitting under the surface waiting to be discovered.

"A lot of people think that we find these whole pots or lots of nicely made arrowheads," he said. "That's extremely rare to never. They were just like people today in that they wouldn't throw something away until it was broken. If they did leave something behind, the weight of the ground would smash it flat." In the units dug this summer, artifacts were found about three feet below the surface of the ground.

"We find just basically garbage, food remains, broken tools, pottery they used with cooking," Harl added. "The only structures we find are burned remains of houses. That's what makes Midwestern archaeology so much more of a challenge — we're working with more fragile clues. We piece things together like a detective would at a crime scene."

Harl said that in future years, the field students will probably continue to work at the Bridgeton site. But he added that only about ten percent of the site will actually be excavated by the UMSL group.

"We'll preserve most of the site for future archaeologists," he said. "Something many people don't realize is that once you dig a site you totally destroy it. This way, somebody can always go back and excavate with new techniques. And with ten percent of the site you can learn everything you need to know if you sample it properly."

Field student Didi Whitehead said she had enjoyed her archaeology experience.

"I liked the actual troweling," she said. "It's like going fishing — you never know when you'll get 'the big one'. It was exhausting but fun, and I lost seven pounds!"

Although much of the work students did was physical, they found that just as important were the exact keeping of notes and maps.

"Digging and sifting are the easy parts, and the glamorous parts of archaeology," said student Joe Janowski. "That's the part everybody thinks of when they think of archaeology. But all the paperwork and preparation are just as important."

Artifacts such as those shown at top left have been found at the Bridgeton site of the UMSL Archaeology Field School this summer. Center, archaeologist Joe Harl explains digging techniques to visitors at the school's open house. All the dirt is carefully shoveled and screened for artifacts. Above, UMSL student Joe Janowski looks for important finds during the screening process. Diagnostic materials found, such as tools or pottery, are mapped and labeled in order for archaeologists to understand the overall importance of the site. Above right, students Gail Runcie (left) and Mary Ann Shaw work in what is believed to be the basin of an Indian structure. At right, Linda Rogers removes a sample from the wall of an Indian trash pit. The soil contents will be studied for pollen and food remains.

# Viverito finds new job a pleasant surprise

**Daniel A. Kimack**  
sports editor

Frank Viverito, former manager of sports promotions at UMSL, doesn't take too many chances. He lets things happen by chance, instead.

For instance, when Viverito was appointed supervisor of marketing and promotions for the Civic Center Redevelopment Corp., it was just another day filled with surprises.

"It literally came out of the blue," Viverito said, assessing his new position. "I wasn't looking for the job; I didn't even have a resume prepared."

Prepared or not, the same man who won a Los Angeles Dodgers bullpen car in a raffle finds himself working from an office at Busch Stadium. The car was sold to a used car dealer.

Viverito was named manager of sports promotions at UMSL in April 1983, one year prior to accepting his present job April 1, 1984. Acceptance of applications for the opening at UMSL closed June 30, and the new manager should be named by the beginning of the upcoming semester.

"One objective of the Civic Center Corporation is to increase the number of special events held at Busch Stadium," Viverito said. "For example, there is a motorcycle race upcoming; I'm involved with ticket sales and media relations, and I

work with all of the promotions.

"Also, there is no general marketing director for the entire corporation — Busch Stadium, the Hall of Fame, etc. — and I work to try to tie them all together.

"Another aspect is our extensive guest relations program. We work diligently with our service employees to make sure our guests are treated properly.

"The Civic Center Corporation is still a growing company. We are trying to pitch in to the entire downtown efforts to make the area more a part of St. Louis life.

"People already have a good perception of Busch Stadium and the Cardinals," he added. "We try to build that perception."

Viverito came to UMSL after his wife, Patty, found work in St. Louis. Both are in sports-related fields, and opportunities have blossomed for Viverito after his wife accepted the position of commissioner of the Gateway Athletic Conference.

The conference represents 10 Midwest National Collegiate Athletic Association Division 1 women's athletic programs, and works to negotiate television contracts, to supervise publicity and to coordinate officiating, among other duties.

"It's not only a good job for her, but an important one," Viverito said. "She is breaking new ground

and is in a pioneering role in women's collegiate athletics.

"We considered the move to St. Louis worthwhile."

With the transition, Viverito left a job at Old Dominion University as athletic programs director. He brought the skills to UMSL not only as promotions director, but as sports information director and fund-raising head.

"At Old Dominion," Viverito said, "I was involved full-time with promotions and I also had a full staff. At UMSL I reached out into other areas and did not always have a full-time staff."

In the promotions field at UMSL, Viverito held Spirit Night and brought in the Dixie Daredevils and the Big Red Line at basketball games. He did work with other sports, also.

His biggest contribution to the university's athletic program was the founding of the Red and Gold Club, a fund-raising organization devoted entirely to UMSL athletics.

Viverito, along with Dave Arns, manager of alumni activities, gathered corporate and local business help for the club and named Stan Musial as co-chairperson for the club's kickoff banquet.

"I really enjoyed working at UMSL," Viverito said. "But you have to work at fund raising to make it successful.

"I had a great time being with the athletes. They all work hard even though they do not get the media coverage they deserve. You can't beat them.

"One vivid memory I have," Viverito added, "is the men's soccer game against California State University-Hayward. They played through regulation with no score and two more overtime periods. When the men scored all five penalty shots at the end of

the game, it gave me a real neat feeling. They worked hard for something and were able to realize it."

And Viverito said that if UMSL athletics are to flourish, there will have to be added corporate support from within the community. Last year, he said, it could have been better.

That, however, will be left to Viverito's successor.

## Dallas announces soccer schedule

A home game with Saint Louis University and the annual Budweiser Classic are among the highlights of the 1984 UMSL soccer schedule, announced last week by head coach Don Dallas.

Dallas will have 13 lettermen back from a team that compiled a 13-6 record and played in the National Collegiate Athletic Association Tournament for the 12th consecutive year, losing to Seattle Pacific University 5-2 in the quarterfinals.

Among the 13 are the second leading scorer from 1983, Tom Olwig, who had eight goals, and third leading scorer Steve Hoover, who had seven. Returning

to anchor the defense is goalie Greg McFetridge. The Rivermen turned their season around when McFetridge was inserted into the lineup midway through the year and promptly rattled off six straight shutouts. He finished with a total of eight shutouts and a 0.33 goals against average.

Key losses among the six letter winners not returning are first-team All-Midwest selections Lance Polette, John Pallett and John O'Mara. Polette led UMSL with 11 goals.

Coach Dallas, the only soccer coach UMSL has had, takes a 135-63-23 record into his 17th season.

## Coaching changes made in women's cage, softball

Cathy Lewis has been appointed head women's softball coach, and Ed Harris has been appointed assistant women's basketball coach at UMSL, it was announced by Chuck Smith, athletic director.

Lewis replaces Mike Larson, who will now devote all his time to his duties as head women's basketball coach. Lewis has served as assistant coach in both softball and basketball for the past three years.

A 1980 graduate of UMSL, Lewis lettered in softball, basketball and field hockey. She led the team in hitting her junior year and captained the team as a senior.

Harris is a 1976 graduate of UMSL who has served as head

girl's basketball and assistant football coach at Parkway South High School for the past eight years. He recently was appointed head football coach at Kennedy High School. He replaces Lewis on the UMSL women's basketball coaching staff.

"We believe we have improved our chances of being competitive in both sports," Smith said.

"Coach Larson will now be able to devote all of his attention to the women's basketball program with able assistance from Ed Harris, whose accomplishments at Parkway South speak for his basketball coaching ability. Cathy Lewis has been an excellent player and assistant

coach in softball. Her ability, combined with the fact that we will now have a head softball coach whose only coaching responsibility is softball, will improve that sport as well."

## Student groups, campus services and departments:

# This Ad's For You!

The Current will publish a special orientation issue on Aug. 13. It will be distributed to freshmen and new students, and also will be on our newsstands during the first week of classes in the fall. This is the perfect opportunity for you to tell

new students about your organization.

Reduced advertising rates are available for student groups, campus services and departments wishing to promote activities and services to UMSL students. Call our

advertising department at 553-5175 for more information. The deadline for submitting ads is noon Monday, Aug. 6.

You also may write an article about your organization or service. The articles must be typed double- or triple-

spaced. Be sure to mention your location, hours of operation and phone number. The deadline for submitting these articles is Friday, Aug. 3, at 3 p.m. Include your name and phone number so we can reach you if we need more information.
